Risk Factors and Investment Considerations

The NAV of the Fund may fluctuate due to changes in the market values of the Fund's investments. Such changes in market value may be attributable to various factors such as:

A. Factors External to the Fund, listed in the order of importance:

1) Market Risk - The risk that movement in the financial markets will adversely affect the value of investments of the Fund. To properly manage market risk, various risk measurement methodologies are utilized to quantify the potential change in portfolio value resulting from changes in security prices. Measures of risk-adjusted performance are also utilized. Market risk is controlled through the establishment of investment limits and by managing the fund according to investment guidelines and parameters that are consistent with its return objective and risk profile.

2) Interest Rate Risk - The risk that the value of the portfolio will decline as interest rates rise. Short-term bond prices are inversely related to interest rates (ie. as interest rates increase, short-term bond prices decrease). Interest rate risk is measured using duration and controlled through duration limits. To mitigate this risk, the Fund Manager closely monitors movements in interest rates.

3) Liquidity Risk - The risk that the investments of the Fund cannot be sold or converted into cash within a reasonable time or in instances where sale or conversion is possible but not at a fair price. A liquidity contingency plan, which provides a framework for addressing liquidity crisis situations, is in place.

4) Credit Risk - The risk that the bond issuer may not be able to pay its debt when interest payments and maturity falls due. Credit risk is minimized through diversification. Investment and counterparty limits are also established and monitored regularly. All investment outlets and counterparties go through accreditation prior to the execution of investment transactions.

5) Inflation Risk - The risk that the return of your investments will not keep in pace with the

increase in consumer prices. To mitigate inflation risk, the Fund Manager closely monitors inflation.

6) Reinvestment Risk - The risk associated with the possibility of having lower return when maturing securities or the interest earnings of funds are re-invested. To mitigate reinvestment risk, the Fund Manager closely monitors interest rate trends so as to re-invest at higher interest rates.

7) Foreign Exchange Risk - This is the possibility for an investor to experience losses from a decline in fund value when the market value of fixed income securities, settled in any other currency, held by the fund are converted/translated to Philippine Peso. To mitigate foreign exchange risk, the fund manager closely monitors the movements in the spot market.

B. Risks Inherent to the Fund, listed in the order of importance:

1. Investors in an open-end fund are exposed to the risk of dilution, since other investors are allowed to purchase shares and/or redeem their entire holdings any time. Given this inherent risk, the Fund Manager tries to lessen the frequency of withdrawals by imposing an early redemption fee for investors who redeem from the Fund during the stipulated minimum holding period. By doing this,

investors are discouraged to redeem during the minimum holding period, thereby allowing the Fund Manager to maximize the investments during the said period.

2. Unlike closed-end funds, the investment potential and capability of the Fund is limited by liquidity constraints as the Fund Manager should always ensure that there are sufficient liquid assets to service redemptions at any given time.

3. Unlike bank accounts, investment companies / mutual funds are neither insured with the PDIC nor any other agency of the government, nor guaranteed by the Fund Manager. Before investing in the Fund, investors are expected to understand that the Fund is not a bank deposit product and any income, or loss, shall be for the account of the investor. Investors are advised to read the Prospectus of the Fund, which may be obtained from authorized distributors, before deciding to invest. The Fund is registered with the Securities and Exchange Commission.

4. Mutual funds are subject to "manager risk," which is the potential for a fund to fail to achieve its objectives due to investment decisions by the Fund Manager, caused by the Fund Manager's ability, or failure, to "read the market" accurately. To mitigate this risk, the Fund Manager employs a thorough investment process, considering macroeconomic factors and integrating them in asset allocation models to optimize the return of the portfolio. The Fund Manager likewise keeps abreast of current market conditions through various trainings and seminars on fund management techniques as well as close coordination with various counterparties and regulators.

MANAGEMENT DISCUSSION AND ANALYSIS OR PLAN OF OPERATIONS

AS OF JUNE 30, 2022

The Philippine economy grew 7.4% in the second quarter of the year, falling behind the expected 8.4% growth for the period as rising inflation levels curbed consumer spending. The Philippines reported a balance of payments deficit of \$1.57 billion in June, more than five times the \$312 million deficit seen in the same month last year due to the settlement of the nation's foreign currency debt obligations. Due to the massive back-to-back shortfalls in May and June, the overall deficit increased by 60% to \$3.1 billion in the first half of 2022 from the \$1.94 billion reported in the first half of 2021.

Meanwhile, the BSP raised benchmark rates by 25 basis points in June, bringing policy rates to 2.5% to temper rising inflation. Inflation has been accelerating, coming in at 6.1% in June from the 5.4% recorded in May and 4.9% in April, marking the third consecutive month inflation breached the official 2-4% target band due to higher food prices, and transport and utilities costs. The central bank also reiterated gradual policy normalization despite the weakening of the Philippine peso against the US dollar to a more than 16-year low.

Top Five Key Performance Indicators as of 30 June 2022

- a) **Performance vis-à-vis the Benchmark** – ALFM Money Market Fund is an actively managed short term fund whose objective is to achieve capital preservation by investing in fixed income and money market instruments. The Fund's return on investment (ROI) for the 2Q 2022 was at 0.72% net of fees and taxes, outperforming its benchmark by 27 basis points.
- b) **Market Share in the Industry** – The Fund is expected to continue its strong presence in the mutual fund industry. The Money Market Fund industry only has three players in terms of Net Asset Value: Sunlife Prosperity Peso Starter Fund, ALFM Money Market Fund and First Metro Money Market Fund. As of end-June 2022, ALFM Money Market Fund had 31.7% of market share, maintaining its second place in the money market fund segment.
- c) **NAV Growth vis-à-vis Industry Growth** – The Fund's average daily NAV for the first quarter of 2022 was at PHP 60.78 Billion. The money market fund industry increased by 1.79% in terms of total net asset value or by PHP 3.37 Billion. ALFM Money Market Fund's NAV also increased by PHP 2.5 Billion or 4.29% year-to-date, increasing along with the industry but still maintaining its second place in the money market fund segment.
- d) **Portfolio Quality** – The Fund's portfolio should, adhere to the investment parameters as indicated in the Fund's prospectus. The Fund continued to remain well diversified in 2Q 2022 with 26.64% in government securities, 40.33% in corporate bonds, 1.73% in fixed income funds, and 31.30% in cash and cash equivalents.
- e) **Performance vis-a-vis Competition** - The Fund's performance is also compared against the performance of other players in the market. As of end-June 2022, ALFM Money Market Fund ranked in second place out of three money market funds in terms of year-to-date returns.

AS OF DECEMBER 31, 2021

Philippine GDP grew 5.6% in 2021 after posting a 7.7% growth in the fourth quarter as loosened pandemic-related restrictions lifted business activity. The annual performance slightly beat the adjusted target range of 5% to 5.5% and reversed a record 9.6% contraction in 2020, when the country imposed prolonged lockdowns to contain the spread of COVID-19. The Philippine economy also benefited from the loose monetary policy set by the Bangko Sentral ng Pilipinas, which kept policy rates at 2.0% since November 2020. Meanwhile, inflation in the country accelerated from 2.6% in 2020 to 3.6% in 2021, rising to as high as 4.9% in August due to higher fuel and food prices arising from supply-side shocks.

Consequently, the elevated inflation rate pushed yields of government securities higher across the board in 2021. For the year, the yield on the 1-year rose by about 44 basis points to 2.0%, the 5-year yield rose by about 169 points to 4.20%, while the yields on 6-10-year securities rose by about 184 basis points on average. As a result, 2021 was a challenging year for fixed income markets.

For the year, the ALFM Money Market Fund gave a net return on investment of 1.17% keeping in step with its benchmark which was at 107%. With this, the fund ended the year with a NAVPS at PHP 131.21.

The Fund continues to maintain portfolio quality through active duration management, yield curve positioning, and yield-enhancing credit investments. As of year-end 2021, portfolio duration of the fund stood at 0.66.

For 2022, we expect Philippine economic growth to pick up as the economy opens up since the lockdowns are no longer in place and consumer's mobility is on the rise. As for the monetary policy, the BSP is expected to start raising policy rates in the second half of 2022 as it tries to fight inflation.

Thus, for 2022, expect ALFM Money Market's priority to give investors a consistent, stable return that is true to its investment objective. The Fund will be cautiously positioning in short-term investments amidst higher inflation expectations. Long-term investors will get the full reward of investing and shareholders should be prepared to withstand some short term volatility.

3. Past and future financial condition and results of operation, **with particular emphasis on the prospects for the future.**

While the fund showed a favorable performance during 2021 amounting to 601M, income was pulled down by the loss incurred on foreign exchange by 229M. Furthermore, the fund

had 320M total expenses, which is mostly management and distribution fees at 266M, much higher than the 152M and 81M in 2020 and 2019, respectively.

The fund is looking to convert its liquidity in USD to global securities to hedge foreign exchange volatility, so as not to affect fund performance for the period.

- a) Interim Periods: Comparable discussion to assess material changes (last fiscal year and comparable interim period in the preceding year). ***Disclose the required information required under subparagraph (2)(a)(I) to (viii) above.***

Total assets of ALFM Money Market Fund sits at 60.8B as of June 30, 2022, 2.5B higher than yearend-2021 figures. The fund increased its liquidity to 17B while diminished its financial assets amounting to 1.6B and 40.6B for profit and loss and amortized cost, respectively. Consequently, liabilities also increased to 38.4B as of 2Q 2022, as deposits for future subscriptions rose by 2.3B during the period. The fund's increase in size is attributable to the net contributions made during the period and a net income as of quarter end June 30, 2022.

The fund performed fairly well, as net profits are at 444M. The fund was able to hedge against foreign exchange volatility, but incurred net loss on financial assets valued through profit and loss during the period.

AS OF DECEMBER 31, 2020

Philippines 1Q GDP contracted 0.2%, the first in 22 years. This is far from 4Q2019's 6.7% growth and 1Q2019's 5.60%. The last time the country's economic activities contracted was in 1998 Asian Financial Crisis coupled with one of the worst El Nino effect that the country experienced. The negative growth came in as a result of business closures and job losses amidst the Enhanced Community Quarantine or "ECQ" in major economic regions in the Philippines. Economists are still expecting contraction for the second and third quarter. Full year GDP has been revised down to 0% to 4%.

Inflation print remained benign and stayed within government range of 2%-4% for the first quarter as it averaged 2.60%. The lower inflation print came as a result when the Brent oil dipped on the back of border closures and business closures of major countries in their race to contain the spread of the Covid-19 virus that have killed thousands of people. At the same time, the 2020 full-year government forecast has been revised down to 2.2% year-on-year from 3%.

In its bid to cushion the economic contraction, the government have started doling out cash to the poorest household to aid them in household consumption during the ECQ. At the same time, the BSP reduced its overnight rate by 125 bps to 2.75% from 4.00% and reduced the country's Reserve Requirement Ratio by 200bps to 12%; releasing liquidity in the financial system.

For the first quarter, the local bond market was a roller coaster ride. The year started with the bond yield curve inclining by an average of 20bps then down by 23 bps the following month. In the month of March, when there was a sudden spike of the population infected with Covid-19, the Philippine government announced a sudden "locked-down" on the National Capital Region and placed it under ECQ. Business and constructions were halted for a minimum of 30 days with

thousands of day-workers suddenly displaced and out of job. The anxiety of the situation spilled over to the bond market as there was a mad dash for cash since there was no precedent event and the virus has no known vaccine/cure. The yield curve rose as much as 40 bps across the curve and illiquidity havocked the market. In BSP's bid to provide liquidity in the bond market, it pledged to buy at least PHP 300billion worth of government securities in the secondary market. At the same time, BSP remains accommodative in its monetary and fiscal policy for the remainder of the year and is willing to act swiftly and do so outside scheduled regulatory meetings.

For the quarter, the ALFM Money Market Fund was able to give a return of 0.72%, net of taxes and fees, or a Trading NAV per share of PHP 126.74 or PHP 0.91 up from 2019's year-end of PHP 125.83. The Fund saw a net inflow of subscriptions for the quarter as it saw an increase in its NAV as assets have increased an approximate PHP 3.32 Billion.

Earnings per share slowed down to PHP 1.05 versus year-end's PHP 1.35. This is as expected since the reinvestment rates have come down amidst flush of liquidity in the market since the government had reduced RRR and RRP and, at the same time, started bond buying in the secondary market.

No other notable matter to be reported.
